

Solid design with heavy-duty folding arms, anti-corrosive chain and powerful springs, which enable excellent fabric tension. An optional arm bracket with pitch control allows you to angle the awning for maximum shade comfort whatever the height of the sun. Ibiza can also be equipped with an aluminium hood or semicassette to protect the fabric from the elements.

Operation

External operation with crank as standard. Optional motor control for both external and internal operation. The motor can have automatic controls such as remote control or sun and wind sensors.

Installation

The awning can easily be installed directly on to the wall or under the eaves. Flexible roof brackets available for angled roofs.

Folding Arms

Heavy-duty folding arms equipped with chain connection for superior strength and durability. The chain over both the elbow and arm brackets improves stability. Heavy-duty springs provide excellent fabric tension.

For maximum shading comfort, the optional arm bracket with pitch control allows stepless adjustment of the projection angle between 5° and 40°. The angle is adjusted by rotating the eyelets with the crank.

Components

The selection of anti-corrosion and highly durable materials allows us to offer you a comprehensive warranty. No maintenance required.

Dimensions

Projection: 1.25, 1.75, 2.1, 2.6, 3.1, 3.6m
 Maximum width: 6.0m per unit
 Series connection up to 15.0m with motor
