

roller blinds

Our Roller Blind series is designed to provide customers with an innovative and stylish performance based shading solution. Advanced engineering and componentry means these blinds can be used in a range of settings, including those involving extremely narrow, large or oversized windows.

Our highly adaptable operating and braking systems are capable of coping with either very small or very large loads. The same applies to our range of extruded aluminium head rails which are available in an assortment of designs and sizes. Different combinations of mechanism and head rail systems can be utilised to optimise function and aesthetic appeal.

Base rails are available in either anodised or colour powdercoated finishes and come in a range of styles and shapes. These factors coupled with an array of fabric options means our Roller Blind series can be co-ordinated to suit to individual styles and decorating schemes.

Specifications

Brake systems: provide simple and smooth operation, while at the same time maintaining a subtle and minimalistic appearance. These are available in several load capacities, ranging from 2.5 to 8.1 kgs, with the option of spring assistance, if required, to further enhance blind capabilities

Motorisation: Individual or multiple blinds can be motorised and easily controlled by means of wall mounted switches, remote controls or integration into Building Management Systems (C-Bus).

Installation: A variety of mounting systems are available, including our dual system which allows two individual blinds to be set on a common bracket.

Function

As you can see, the Sheer Blinds Roller Blind series is capable of being utilised in a wide range of unique settings, including home theatres and outdoor areas.

These are the perfect blinds to not only complement the look of any dwelling, but to actively and effectively control light, glare, and solar transmission, whilst providing excellent degrees of privacy and screening.
