

roman blinds

Stylish and practical, Roman blinds have a timeless quality. Available in a range of fabrics, including sheer, translucent and blackout, the visual appearance of these blinds will complement and enhance any setting.

Classic: A casual Roman, manufactured using a rear batten design and available in a selection of fabrics offering differing degrees of insulation.

Contemporary: Sophisticated and subtle. Front and rear battens accentuate the classic horizontal lines of this blind. These are available in a range of colours to cater for individual styles and tastes.

Custom: These unique blinds combine a blackout lining with designer fabrics, to create a truly individual and personal window covering.

Operating Systems:

Cord Lock: A popular option, this system allows the blind to be precisely locked off in any desired position.

Chain: A single continuous chain eliminates the need for cords and again allows the blind to be set in any required position.

Motorisation: Ideal for situations where oversize blinds exist or where manual operation is unsuitable. Total control of individual or multiple blinds can be achieved with the touch of a button. Our System 60 enclosed head rail has been

designed to eliminate all visible working components and may be custom powder coated upon request. This system differs from all others on the market in that it does away with the need for either spindles or spools. We utilise a bearing system and lifting tapes so that tangled cords become a thing of the past.

The System 60 can be operated via a wall mounted switch, remote control or integrated with a building management system.
